Installation Guide

axytos BNPL for Magento2

axytos GmbH

Installation Guide

The plugin provides the payment method **purchase on account** for shopping in your Magento shop.

Purchases made with this payment method may be accepted by axytos up to receivables management.

All relevant changes to orders with this payment method are automatically sent to axytos.

Adjustments beyond the installation, e.g. of invoice and email templates, are not necessary.

For more information, see https://www.axytos.com/.

Requirements

1. Contractual relationship with https://www.axytos.com/.

2. Connection data to connect the plugin to https://portal.axytos.com/ zu verbinden.

In order to be able to use this plugin, you first need a contractual relationship with https://www.axytos.com/.

During onboarding you will receive the necessary connection data to connect the plugin to.

Plugin installation

Via Marketplace

1. Buy and add the plugin "axytos Kauf auf Rechnung" in Magento Marketplace for free.

2. Follow the instructions in the Marketplace.

Via Composer

Install the Composer.

Run the following commands in your console in the root of your Magento distribution.

```
1  composer require axytos/kaufaufrechnung-magento2
2  php bin/magento module:enable Axytos_KaufAufRechnung
3  php bin/magento setup:upgrade
4  php bin/magento setup:di:compile
5  php bin/magento cache:clean
```

The plugin is now installed and can be configured and activated.

In order to be able to use the plugin, you need valid connection data for https://portal.axytos.com/ (see requirements).

Payment method configuration in Magento

1. Switch to the administration of your Magento distribution. The axytos purchase on account payment method can be found under STORES > Configuration > SALES > Payment Methods > OTHER PAYMENT METHODS.

2. Change **Enabled** to "Yes".

3. Choose **API Host**, either 'Live' or 'Sandbox'.

4. Enter **API Key**. You will be informed of the correct value during the onboarding of axytos (see requirements).

5. Enter **Client Secret**. You will also be informed of the correct value during onboarding (see requirements).

6. Run **Save Config**.

For configuration, you must save valid connection data to https://portal.axytos.com/ (see requirements), i.e. **API Host**, **API Key** and **Client Secret** for the payment method.

Payment method can't be selected for purchases?

Check the following points:

1. The plugin **axytos purchase on account** is installed.

2. The payment method **axytos purchase on account** is activated.

3. The payment method **axytos purchase on account** is configured with correct connection data (**API Host** & **API Key**).

Incorrect connection data means that the plugin cannot be selected for purchases.
